- Programmable cooking

- Digital LCD
- Power mode
- Temperature mode
- Temperature probe function
- One touch boil
- One touch simmer
- Program lock
- Program cooking function
- On/Off selector
- Control knob

ADJUSTABLE COOKING METHODS

HEAT

POWER MODE

Adjust the wattage (power) applied to your cookware. This mode heats cookware quickly but use the temperature mode if strict temperature control is required.

- One-Touch Boil automatically selects power level 10

TEMP

TEMPERATURE MODE

Adjust the temperature setting to get more accurate control of your cookware. Tip: this mode measures the temperature of the base of your cookware and not the temperature of the food you are cooking.

- One-Touch Simmer automatically selects 100°F (38°C)
- Minimal temperature fluctuation

TEMPERATURE PROBE

For very precise temperature control of cookware contents use the Temperature Probe function. Selected temperature will be maintained within +/- 10°.

- Turn your induction into a sous vide
- Candy making
- Beer brewing
- Accurate oil temperature

PROGRAMMABLE COOKING

Program up to 3 cooking conditions using different temperatures and time settings.

- Slow cooking
- Sous vide
- Program up to 480 minutes of cooking
- Stage cooking
